NINETEENTH ANNUAL REPORT
OF THE
ONTARIO BUREAU OF INDUSTRIES.
PARTS I. AND II.
1900.

TO THE HONORABLE THE MINISTER OF AGRICULTURE :

Sir,—I have the honor to present herewith Part I. of the Nineteenth Annual Report of the Bureau of Industries, being the Agricultural Statistics of Ontario for the year 1900 ; also Part II. relating to Chattel Mortgages.

I have the honor to be, Sir,

Your obedient Servant.

C. C. JAMES,
Secretary.

Toronto, August 28th, 1901.

CONTENTS.

PART I.—AGRICULTURAL STATISTICS.

	PAGE
THE WEATHER : General review, showing the monthly <i>temperature, rainfall, and sunshine</i> for the ten years 1891-1900	7
VEGETATION : Spring Seeding	9
THE GRAIN CROPS : General description as to condition and harvest.	
Fall Wheat	10
Spring Wheat	10
Barley	11
Oats	11
Peas	11
Beans	11
Rye	11
ckwheat	12
Corn	12
HAY AND CLOVER : General description	12
Clover seed	12
FIELD ROOTS : General description.	
Potatoes	12
Carrots	12
Mangels	13
Turnips	13
Sugar Beets	13
FRUIT AND FRUIT TREES : General description	13
MISCELLANEOUS :	
Flax	13
Hops	14
Lucerne	14
Rape	14
Tobacco	14
Sorghum	14
The Canning Business	14
Farm Improvements	14
Threshing and Marketing	14
Fall Plowing	14
LIVE STOCK AND THE DAIRY : General review as to condition in 1900.	
Live Stock	14
Average value per head	15
The Dairy	16
Cheese Factories	16
Creameries	16
Poultry	16
The Apiary	16
LABOR AND WAGES : General condition, with statistics of average wages of farm laborers and domestic servants for ten years	17
STATISTICS OF THE WEATHER : Showing details by months and stations or districts.	
Temperature, 1900	18
Temperature, 1882-1900	19
Rain and Snow	20, 21
Sunshine	21

	PAGE.
Toronto Observatory.....	22
Register at Lake Temiscamingue	23
RURAL AREA ASSESSED : Showing by counties as taken by municipal assessors for 1900, the total area, acres cleared, acres in <i>woodland</i> and acres in <i>swamp, marsh, or waste lands</i> ; also totals for the Province for the ten years 1891-1900.....	24
STATISTICS OF FIELD CROPS : Showing by counties the area, produce and market values for the year 1900, together with totals for the Province for the past ten years, and the averages for the period 1882-1900; also the averages per acre.	
Fall Wheat	25
Spring Wheat	25
Barley	26
Oats	26
Peas	27
Beans	27
Rye	28
Buckwheat	28
Corn	29
Potatoes.....	30
Carrots	31
Mangel-wurzels	31
Turnips	31
Hay and clover	32
All field crops as above	32
RATIOS OF AREAS UNDER EACH CROP IN 1900 PER 1,000 ACRES OF CLEARED LAND	33
PASTURE—ORCHARD—VINEYARD—APPLES	34
STATISTICS OF LIVE STOCK : Showing by counties the number and value of stock on hand July 1, 1900, together with the number and value of those sold or slaughtered during the year ending June 30, 1900; also comparative totals for the Province.	
Horses	35
Cattle.....	36
Sheep	37
Hogs	38
Poultry	39
WOOL : Showing by counties the clip in 1900.....	40
BEEES : Showing by counties the number of colonies and value (including outfit).....	40
VALUES OF FARM PROPERTY : Showing by counties the value of <i>farm land, farm buildings, implements, and live stock</i>	41
Farm values per acre occupied	42
Value of buildings, implements, and live stock per acre cleared.....	42
Rentals of leased farms.....	42
MARKET PRICES : Showing for the leading markets of Ontario the average prices of agricultural products for the last six months of 1900, with comparative averages for the Province for ten years	43
CHEESE FACTORIES : Showing by counties the number of cheese factories in operation in 1900, the quantity and value of cheese made, the number of patrons and the amount paid to patrons, together with the totals for the Province for ten years	44

PART II.—CHATTEL MORTGAGES.

CHATTEL MORTGAGES ON RECORD : Showing by counties the number and amount of chattel mortgages on record and undischarged on December 31, 1900, against (1) all occupations, (2) farmers; also totals for the Province for ten years	45
--	----

INDEX.....	47

ONTARIO BUREAU OF INDUSTRIES.

PART I.—AGRICULTURAL STATISTICS.

THE WEATHER.

Among the most important factors in the growing of crops are the character of the soil and the nature of the tillage; but in addition to these the range of temperature and the extent and distribution of the precipitation are also to be taken into consideration, as well as the amount of sunshine afforded for the proper maturing of certain plants, grains and fruits. The following table gives the records of temperature, rain and snow fall, and sunshine, during certain periods which may be regarded as the growing season of 1900.

TEMPERATURE. The following table gives the average temperature of the Province for the calendar year, the mean for the six months from April to September inclusive—practically the growing season—for the past ten years, and also the average for the nineteen years, 1882-1900.

Months.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1882-1900.
January.....	21.9	18.7	20.2	19.5	18.4	17.3	23.1	10.3	17.0	20.9	17.6
February.....	17.1	15.2	22.0	21.8	19.2	14.5	16.9	14.7	21.9	23.4	18.2
March.....	20.5	25.8	35.6	29.0	21.2	21.5	34.9	26.4	25.2	26.2	25.3
April.....	44.8	44.5	42.1	42.7	46.3	43.3	44.3	38.7	40.3	43.0	41.6
May.....	54.6	55.7	55.5	52.9	60.1	56.9	53.7	52.2	52.2	51.9	53.7
June.....	64.1	64.8	65.6	60.9	64.8	68.0	66.1	67.6	65.4	65.4	64.2
July.....	68.2	67.5	70.2	71.9	68.8	65.5	69.1	68.3	68.3	63.7	67.7
August.....	70.9	68.5	67.7	64.2	67.2	65.3	64.0	66.1	66.6	64.8	65.8
September.....	62.3	56.2	61.8	60.8	56.8	60.5	61.1	56.0	58.8	61.5	58.5
October.....	55.2	50.0	48.7	50.1	43.4	41.4	48.8	48.2	46.6	46.1	46.6
November.....	35.3	38.0	34.9	34.9	37.8	34.5	31.6	35.1	33.1	35.1	34.9
December.....	24.7	25.1	22.8	24.6	24.1	25.8	27.7	20.7	21.8	31.5	24.3
Annual mean.....	45.0	44.2	45.6	44.4	44.0	42.9	45.1	42.0	43.1	44.5	43.2
Mean for six months April-September.....	60.8	59.5	60.5	8.9	60.7	59.9	59.7	58.2	58.6	58.4	58.6

The ten stations from which the above averages are derived are situated at Saugeen (Bruce Co.), Birnam (Lambton), London (Middlesex), Woodstock (Oxford), Stoney Creek (Wentworth), Toronto (York), Lindsay (Victoria), Gravenhurst (Muskoka), Ottawa (Carleton) and Rockcliffe (Renfrew). The details will be found in Tables I and II (pages 18 and 19).

The mean temperature for the six months April-September was 60.8, being 2.2 above the average for the nineteen years, and exceeding the record of any year in the table. The mean temperature for the whole year was 45°, being 1.8° above the average for the nineteen years, although failing to reach the records for 1894 and 1898. February was the coldest month in 1900 and August the hottest; while for the nineteen years' period January was the coldest month and July the hottest.

PRECIPITATION. The following table gives the fall of rain and snow in the winter months for ten years, together with the average for the nineteen years 1882-1900. An inch of rain is the equivalent of ten inches of snow.

Year.	November.		December.		January.		February.		March.		Total for five months.	
	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.

1894.....	1.97	9.9	1.85	26.2	0.91	14.0	0.59	15.1	1.15	4.8	6.47	70.0
1893.....	2.09	10.8	0.68	11.6	0.43	25.5	0.73	24.3	1.19	5.4	5.12	77.6
1892.....	3.91	7.4	1.84	6.4	0.44	21.7	0.66	16.7	0.50	7.7	7.35	59.9
1891.....	2.46	4.3	0.35	20.1	1.37	13.9	1.77	13.3	1.46	19.7	7.41	71.3
1882-1900....	2.13	8.4	1.35	15.3	1.05	20.3	0.97	16.7	1.07	11.9	6.57	72.6

The rainfall of the Province for the five months was 6.21 inches, or .36 inch less than the average for the nineteen years. The snowfall, however, measured 76.9 inches, or 4.3 inches more than the average for the years 1882-1900. December was the only month that closely approached its own record for both rain and snowfall, the month of November being farthest from its average in this respect. The snowfall of February exceeded that of any month during the ten years, and that month also has the largest average snowfall.

The growing season, however, is limited mainly to the six months April-September, and the following table gives the rainfall during these months for the past ten years, together with the averages for nineteen years 1882-1900.

Months.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1882-1900.
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
April.....	1.44	1.10	1.45	2.52	1.26	1.49	0.99	2.61	1.15	1.77	1.52
May.....	2.03	3.43	2.43	3.38	2.10	2.36	5.72	3.35	3.64	1.07	2.84
June.....	2.83	2.46	2.83	2.83	2.39	1.37	2.32	3.15	4.54	1.84	2.80
July.....	3.96	2.78	1.11	5.36	2.79	2.02	1.72	2.44	2.73	3.50	2.63
August.....	2.15	0.81	2.64	2.62	2.86	2.81	0.84	2.67	4.26	3.93	2.50
September.....	2.73	3.72	2.94	0.83	4.47	2.67	3.73	1.94	3.84	2.03	2.62
Total for six months.....	15.14	14.30	13.40	17.54	15.87	12.72	15.32	16.16	20.16	14.14	14.91

The total rainfall for the six months was 15.4 inches, or 1.77 inches more than the average for the nineteen years. July was the wettest month in 1900, although third in the record for precipitation for the 1882-1900 period; while April is credited with the least rainfall both for the year and for the nineteen years' period.

SUNSHINE. In the following table a comparison of each of the months of the year is given for the past ten years of the average hours of sunshine in the Province, as derived from the records of the stations at Woodstock, Toronto, Barrie, Lindsay and Kingston. The average for the nineteen years 1882 1900 is also given, as well as the totals for the calendar year, and for the six months April-September.

Months.	Sun above horizon.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1882- 1900.

Total for the year.	4463.3	2136.2	2058.3	1965.8	1923.9	2043.4	2036.3	1864.9	1921.7	1925.5	1973.8	1940.6
Total for 6 months Apl.-Sep.	2614.9	1494.9	1441.0	1399.0	1349.1	1412.9	1388.1	1279.1	1326.4	1346.9	1363.3	1368.8

The total number of hours registered in the year was 195.6 more than the average for the nineteen years; while for the six growing months 126 more hours than usual were recorded, or about 57 per cent. of the possible.

Details of temperature, precipitation, and sunshine are given in Tables I. to VII. of this Report.

VEGETATION.

When correspondents wrote on the 1st of May the growing season was described as being rather backward, owing to the prevalence of frosts and cold winds, and the lack of rain. The grass was in excellent condition, and had made a good start, although in some localities it was too short and scanty for the pasturing of cattle, but the prospects were favorable for a bountiful yield if rains and warm weather set in. So far as there was any difference by reason of locality, the season seemed a little more advanced in some of the eastern frontier counties than in the west. The buds of fruit trees and shrubs were swelling, and the forest trees appeared to be about as well advanced as usual.

SPRING SEEDING. The coldness of the season somewhat retarded spring sowing, which was commenced some time later than the customary date in most places. The ground was generally in good condition to receive the seed, the principal exception being as to clay soils, which frequently proved difficult to work, being stiff and lumpy. In the western portion of the Province the soil was generally dry, and rain was badly needed in some places, while in many eastern counties it was too wet to be satisfactorily worked, excepting on the uplands or in the case of light soils. Owing to the backwardness of operations it was difficult to compare the extent of the area sown with the average, but a few correspondents considered that there would probably be an increase, one reason given being the extent to which the clover was killed out last season. The same cause prevented any forecast of the season's prospects from the appearance of young crops, which were then only in evidence in very few instances. Spring sown grass and clover, where they had come up, were looking thrifty.

THE GRAIN CROPS.

FALL WHEAT. Judging by the tone of the reports received in November, 1899, it was thought that the area of fall wheat then newly sown would be less than that of the crop cut that year, but the actual figures showed an increased acreage. The time of seeding covered a wider range than usual, owing to the dryness of the ground, which induced many farmers to postpone sowing until late in the season in the hope of getting rain. As usual, most of the work was done in the earlier half of September, the ground in most localities being in good condition, apart from the lack of moisture. The young plants were generally looking well as correspondents wrote, having received the benefit of later rains, and, although somewhat backward in places, seemed promising, and covered the ground well, having a heavy top. There were few complaints of insect pests, except that Hessian fly, joint-worm, and wire worm had done some damage.

May reports on fall wheat were on the whole favorable, and were to the following effect: "The general tenor of the reports as to the condition of fall wheat is decidedly favorable, the crop having in most localities stood the winter well and promising excellently, provided there is a sufficient supply of moisture. The principal cause of injury has been the formation of ice on level or low-lying lands from water which collected in pools after the melting of the snow, by which many young plants were killed, and the fields left uneven and patchy. The drifting of snow also caused some loss. Opinions as to the kind of soil upon which the crop made the best showing are so variable and contradictory as to preclude any conclusion being drawn from them. One point on which there is practical unanimity among correspondents, however, is the advantage of drainage. The crops on high and dry land, whatever the character of the soil, wintered well with few exceptions, while those on wet, undrained ground suffered badly. A favorable feature of the situation is the general absence of destructive insect pests, the only mention of such being in connection with a few western localities where the Hessian fly and wire worm were in evidence, though the damage inflicted by them has been slight. Very little of the land sown to fall wheat will need to be plowed up. The crop in some parts, especially in the east, is beginning to require rain."

The statements of correspondents received in August justified the expectations of May, as will be seen by the following report made regarding the crop: "The yield of fall wheat is above the average, notwithstanding the losses sustained by winter-killing on low and undrained land and the injury occasioned by dry backward weather in spring in many localities. The crop has been harvested for the most part in excellent condition, the heads being large and well filled, and the grain plump with the straw bright and clean. It is free from rust or smut except in a few instances. The grain ripened somewhat unevenly, and in some parts was over-ripe when cut, and shelled when handling. The weather was as a rule highly favorable for harvesting operations, which took place in the great majority of cases from the middle to the end of July. Several correspondents note better returns from early than from later sown wheat. The principal cause of injury next to the losses from frost was the ravages of the Hessian fly, which was reported more especially in the western part of the Province. The cut-worm and other pests also did some damage. In the St. Lawrence and Ottawa River counties, where the crop is but little grown, the returns offer little inducement for its cultivation as they are not nearly so favorable as those for the western and central section."

November reports were thus summarized: "It is many years since complaints were so common regarding the Hessian fly, more especially in the western half of the Province, where the bulk of the fall wheat is grown; but even in the face of this drawback the crop may be described as a good average one both in yield and quality, the kernel as a rule being plump, and running well to or above standard weight. The straw is said to be shorter than usual, but of good, clean quality. A few complaints were made regarding injury from joint-worm."

THE NEW FALL WHEAT. The following reference to the new fall wheat was made in the November bulletin: "Correspondents in the fall wheat counties of the western part of the Province are divided as to the area of new wheat compared with last year, although it is probable that decreases and increases will about balance themselves, and give an average acreage. In the eastern part of the Province, there is a decided gain in the area grown. The period of sowing ranged from the last week of August to the third week of October, the bulk of the crop being put in about the middle of September. While some complain of a dry seed bed, the majority of the reports speak of a good catch, and in a number of instances the growth has been so rank that cattle have had to be turned into the fields to eat off the tops of the plants. In the western half of the Province the Hessian fly has been attacking the new wheat, but in the counties east of York little or no mention is made of this pest. Over forty different sorts of fall wheat are mentioned as growing, the favorite varieties being Dawson's Golden Chaff, Clawson, and Genesee Giant."

SPRING WHEAT. A large portion of the crop was unharvested at the time our correspondents wrote early in August. The yield was then expected to be in excess of the average, although the conditions had not been altogether favorable. Owing to drouth the straw was short and weak in many neighborhoods, and some of the crop lodged. Where the crop had been secured it was usually in good condition and satisfactory as to quality. The Goose wheat variety

was very largely grown. In the eastern section of the Province some damage from heavy rain-storms was noted, more especially on low-lying lands. Rust and smut appeared in some places, but little mention was made of any injury from insect pests.

The reports in November were to the effect that this crop, especially where early sown, is well spoken of, both as regards yield and quality; but later sown was inclined to be somewhat shrunk in the berry. The straw generally was shorter than usual, and late sown had a tendency to rust owing to rain during harvest. Goose wheat was very extensively grown.

BARLEY. The following was contained in the August bulletin: "The yield of barley has as a rule been good, and in most localities where the harvest is over the crop has been secured in fairly good condition, the principal drawbacks noted being that the grain is in many places discolored owing to recent rains, while the straw is frequently short, slender and broken. Reports as to the quality of the berry are extremely variable, those from some quarters stating the grain is light by reason of dry weather, while elsewhere it is plump and the heads well-filled. Several correspondents note an increase in the acreage devoted to barley owing to the growing demand for feed. The beardless barley has been tried in some neighborhoods, but the results are not satisfactory. There has been but little injury from destructive insects."

Barley was referred to as follows in the November crop summary: "This cereal, like most of the spring grains, suffered to some extent from drouth, yet is looked upon as a good average crop. Regarding the quality, many call it good, while others claim that the sample was more or less discolored, owing to rain, and that it is also somewhat light in weight. The straw, as in the case of other grains, was rather short."

OATS. August reports concerning this crop were encouraging, and were to the following effect: "The oat crop this season is a very large one, the reports being favorable from nearly every county. The west will probably make a somewhat better showing than the east, the crop being a little light in the Ottawa River counties owing to injury by heavy rains. As in the case with other cereals this season the straw is generally light and short. The quality of the grain is as a rule good though the berry is small in some cases. Smut and rust have done some injury in various localities, and grasshoppers are reported as having occasioned some damage both east and west. The early sown crops appear to have given better results than later seedings, as the later suffered more from spring drouths."

The reports sent in in November thus referred to oats: "Notwithstanding complaints of drouth, smut, rust, and grasshoppers this crop came through in such a good general condition as to rank as a full average one. The grain, as a rule, is spoken of as plump, although a few complain of its being light. The straw, however, is not only short, but hardly of as good a quality as usual, owing to rain at the time of cutting."

PEAS. The following regarding peas was given in the August bulletin: "Of late years peas have been a very precarious crop on account of the destruction caused by the pea bug, or weevil. For this reason many have abandoned peas, and others sow them late in the season—a plan which appears to be fairly successful. Only a comparatively small proportion of the crops had been harvested when our returns were made up, but estimates are decidedly encouraging. The vines are light in straw in most cases, but well podded and well filled, and when harvesting has taken place the sample is good. The principal causes of injury have been the pea bug, dry weather in spring, and too much rain in the extreme eastern part of the Province. Grass peas, which in some localities have been substituted for the round pea, have yielded particularly well."

In the returns from correspondents in November complaints of the ravages of the "bug" or pea weevil were so many and so strong as to be alarming. So far the Georgian Bay counties, the Northern Districts, and the East Midland group have largely escaped this pest, but nearly every other section of the Province has suffered more or less from its presence. But for this insect the crop would be reckoned as a good one, although perhaps lacking in straw.

BEANS. According to the August bulletin the season had been a favorable one for beans, and it was considered that the rather limited acreage devoted to their growth would make a considerably better showing than the average. Reports from the localities in which they are grown are almost uniformly satisfactory. There had been very little injury done to the crop either by the weather or by insects.

The November reports were to the effect that beans could be classed as from fair to good. It was said, however, that there was too much rain, especially at the time of podding, for the best results.

WINTER RYE. This crop is being grown more extensively than formerly, especially in stock-raising neighborhoods, being used mainly for pasturage or green fodder, though there are many localities where it is not cultivated. It had generally wintered well, though some injuries from ice, and want of snow were noted, and according to the May bulletin it presented a promising appearance, though not so far advanced as usual owing to the late spring.

RYE. August reports as to this crop were almost uniformly favorable, and the yield per acre was estimated as above the average, and generally of good quality. Rye is very little cultivated in the west, and is not extensively grown elsewhere, but several correspondents from eastern counties state that it is coming more in favor, being used largely as fodder or for green manure. In common with other cereals it suffered somewhat from winter-killing and from the dry weather in the spring.

November returns regarding rye were to the effect that it hardly deserved a place among our regular cereal crops, as it is grown in this Province chiefly for soiling. Where raised for the grain, however, it was well spoken of this season.

BUCKWHEAT. Although buckwheat is not largely grown in the Province there appeared to be a great difference of opinion regarding its condition. A number of correspondents in November spoke of it as being a good crop, while others stated that it suffered from the hot sun. This appears to have been the only grain that was touched by frost, but only to a small degree.

CORN. In western Ontario, where most of the corn is grown for the ear, the season was wet at planting, but in the eastern part of the Province the weather was rather dry at that season. Complaints were made of injury from cut-worm, wire-worm, cabbage-worm, white grub, and grey grub—in some cases different names evidently for the same pest—but notwithstanding these attacks, and the injury from crows, the prospects for corn were good as correspondents wrote in August, except in the extreme eastern part of the Province. Although considered perhaps later than usual no fears regarding injury from frost were then expressed by correspondents.

November reports concerning this crop were almost unanimous in describing it as an excellent one, more especially in those sections where corn is most largely grown. A heavy wind storm in September blew down a portion of the crop and made it difficult to cut, but on the whole the season had been remarkably favorable for corn, both for husking and for the silo. It appeared to have completely escaped frost.

HAY AND CLOVER.

The following is a summary of the remarks of correspondents writing in May: "The losses of last year, when clover suffered severely from the severity of the winter, have somewhat diminished the area devoted to this crop. Owing to fall drouth there was a poor catch in newly seeded meadows, but the winter was a favorable one, and the new growth has for the most part survived in excellent condition. There have been some losses through heaving by frost, more especially in old meadows on low-lying lands, and in some parts the ice has caused injury. The eastern section of the Province has suffered more in this respect than the west. Clover is in a slightly backward condition, and is beginning to need rain badly in some places."

Hay and clover were thus described in the August Bulletin: This crop is a variable one, poor yields and heavy cuttings being reported from adjoining districts. The general return will not be up to the average. The drouth of last year, and winter-killing, are given as the chief causes of the light crop, some old meadows having suffered severely. The weather in most sections was "catchy" during haying, and a considerable portion of the crop was injured by the rain, although a number of correspondents described the hay as having been saved in excellent condition. Owing to delay in haying caused by wet weather some farmers had to leave the crop uncut until after fall wheat harvest.

CLOVER SEED. November reports regarding this crop were not favorable. There was a poor catch of seed in 1899, and the drouth of this season told greatly against the vitality of the second crop. The mid- also attacked clover, particularly in the western half of the Province, and the yield of seed was therefore disappointing. But while red clover did not do well, alsike gave much more satisfaction, especially in the Lake Ontario counties. The bulk of the clover seed had yet to be threshed as correspondents wrote.

FIELD ROOTS.

POTATOES. According to the August reports a good yield of potatoes was looked for, although the beetle had been present in unusually large numbers. Late planted varieties promised better than those put in earlier. Some correspondents feared blight or rot should the wet weather at the time of reporting continue, but happily dry weather had since prevailed.

The November bulletin contained the following: "Most of the reports regarding potatoes are favorable. The crop suffered more from drouth than from rain. The western and central portions of the Province appear to have almost entirely escaped rot, and in those sections the tubers are described as being rather smaller in size than usual, but of good quality, scab being mentioned only here and there. In the St. Lawrence counties and in the East Midland group, however, considerable rot is reported, and scab is referred to more frequently than in the west. Taking the Province over, the crop may be considered a good one both as to yield and quality, and it has been well put away for the winter.

CARROTS. Like other root crops carrots suffered from the dry weather at the time of sowing, but picked up considerably as the season advanced, and November reports were favorable both as to yield and quality.

MANGEL WURZELS. The weather was rather dry at the time of sowing, nevertheless the crop was reported to be in a promising condition as correspondents wrote in August, more especially in the western part of the Province.

November reports concerning mangels were highly favorable, for while adverse comments were few, positive remarks of the excellence of the crop were many. In most cases mangels had been well secured for the winter.

TURNIPS. Fields were rather patchy in August, owing to dry weather at the time of sowing. The crop also suffered from attacks of the fly.

The November bulletin had the following regarding turnips: "Various causes have combined to give this crop a setback this season. While a few correspondents report a good showing, most of the returns tell a discouraging tale. 'Drouth and lice,' 'drouth and flies,' 'lice and cabbage worms,' 'rot and lice,' have been frequently complained of, and the crop, both in yield and quality, is below the average. In many parts of the Province a portion of the crop remained to be housed as correspondents wrote."

SUGAR BEETS. These roots appear to be coming into considerable favor for the feeding of cattle. Much more frequent mention is made of them, and the general tone of the reports is most encouraging. As a result of this year's experience a larger acreage may be looked for in the immediate future.

FRUIT AND FRUIT TREES.

The May bulletin had the following: "Fruit trees and bushes have come through the winter with unusually small loss. Although the season had been backward there was promise of a heavy bloom on fruit trees when correspondents wrote at the beginning of May, and if frosts and heavy rains are escaped at the period of blossoming a large setting of fruit may be looked for. One great drawback to the bright prospects of orchard owners this season is the large number of caterpillars looked for at many points in the Province, east and west. Some correspondents prudently removed the eggs from the branches of apple trees during the winter, but in most cases spraying will be an imperative duty if the apple crop is to be saved from this pest. A few correspondents also referred to the San José Scale and the bark-louse as doing injury."

August reports were to the following effect: "Taken on the whole the season has been a fair one for fruit. Summer and fall apples are abundant, although a large amount of fruit has dropped from the trees on account of drouth and wind. Winter apples are not bearing so heavily as the earlier sorts. Where sprayed, apples will be of fair quality, but where this has been omitted there will be a lot of wormy and scabby fruit. Plums are scarce, and the curculio, where spraying was neglected, has been very injurious. A number of peach trees are reported as having succumbed this season to the effects of the intense cold of the winter of 1888-9, but otherwise peach orchards are as a rule in heavy bearing with a first-class quality of fruit. Varying reports have been received regarding pears, ranging all the way from "light" to "loaded." Cherries were a comparatively poor crop, and the black-knot still assails the trees. Grapes give promise of a good yield, as usual. Strawberries suffer considerably from drouth, and other small fruits raised for the market have been fair; but huckleberries, raspberries and other wild fruits have been abundant."

Fruit trees and vines were reported to be in good general condition in November, although limbs of apple and pear trees were broken during the high winds which occurred in July and September. The tent caterpillar was numerous, and the colling moth was also injurious, although the latter was not so bad as in the previous year. Several correspondents spoke of the beneficial effects of spraying fruit trees; but still too much wormy and scabby fruit was complained of. Mention was also made of the presence of the San José Scale in some of the Lake Erie counties. Apples would have been an immense crop but for the winds, one in September referred to by a correspondent as the "Galveston storm," having shaken down about half of the crop. Some of this fruit was saleable, a lot of it was fed to live stock, and considerable of it was allowed to rot on the ground. Complaints were frequent regarding the low prices offered for apples. It would also appear as if, owing to early ripening of this fruit, that its keeping qualities were hardly as good as usual. Peaches, plums, pears, and most of the small fruits, were more or less a full crop where grown.

MISCELLANEOUS.

FLAX. This crop of late years has not been sown to as great an extent as formerly. The few correspondents referring to flax in the August returns spoke of it as a heavy crop of an excellent fibre. The area in crop was 5,790 acres.

November reports were thus summarized: Considerable flax has been grown this season, but not so much as was raised a few years ago. Most of the flax grown is raised in the western portion of the Province, where a number of flax mills are located.

HOPS. Hops are not commonly grown. Where raised, however, the crop is said to be about an average, the chief injury coming from drouth. Acreage, 1,096.

LUCERNE. This crop is coming into favor, a larger area being covered by it than in previous years. While some speak well of it as hay, others do not care for it in that form. It gives the best satisfaction where pastured.

RAPE. This is said to be one of the best crops for finishing off lambs in the fall, and the acreage is yearly increasing. It is also fed to hogs and other live stock to a certain extent, but owing to milk being strongly tainted by it, it should have no place in dairy farming. The area was 35,711 acres.

TOBACCO. The acreage of this crop, which is confined mainly to the counties of Essex and Kent, was larger than that of last year. According to the August reports the plant has suffered considerably from rain, and also from attacks of the "worm," but as correspondents wrote a considerable improvement has occurred in the condition of the crop. The yield of tobacco is estimated at 2,854,900 pounds from 2,477 acres, or 1,153 pounds per acre. Of this amount the County of Essex produced 2,065,560 pounds from 1,620 acres.

Correspondents who wrote in November regarding tobacco growing spoke of the crop as a good average one, although late planted appears to have been caught by rain.

SORGHUM. In some of the Lake Erie counties, notably Essex, considerable sorghum is grown for the making of syrup. Most of the product is consumed on the farms, although some goes on the market. The crop has been a success this year. A few correspondents elsewhere speak of growing it to cut young as a succulent food for cattle during the dry season.

THE CANNING, EVAPORATING, AND PICKLING BUSINESS. The favorable reference of several correspondents to canning and pickling establishments is suggestive of the great possibilities before the Province in the way of supplying preserved fruits and vegetables to the markets of the world. Corn, peas, tomatoes, cucumbers, pumpkins, onions, etc., as well as a large variety of orchard and garden fruits, are now being preserved in some form or other, and placed upon the market in attractive style. The poultry trade is also receiving considerable attention from Ontario canners. It would now look as if the development of our canning, evaporating, and pickling trade is about to assume larger proportions, in which case there will be a great increase in the income of some of our farmers.

FARM IMPROVEMENTS. November reports stated that a considerable amount of under-draining had been done, but hardly as much as would have been performed had the season not been so dry. New fences are rapidly taking the place of the old crooked rail ones, woven wire now being the favorite style, barbed wire having been found unsatisfactory. A large number of houses and barns have been erected, and many old buildings and stables have been remodelled. In short, the year had been a progressive one along the line of farm improvements.

THRESHING AND MARKETING. The following is from the November bulletin: Threshing was completed in most sections as correspondents wrote, the weather having been suitable for this class of work. Reports regarding the marketing of grains differ. Some state that only a little fall wheat has been sent to market, others that half the crop has been disposed of, and still others put sales at two-thirds of the crop. It is safe to say that a large quantity of first-class fall wheat is in farmers' hands awaiting a rise in price. A good deal of Goose wheat, which has been so largely grown this year, has been sold—relatively more so than of any other grain. While some correspondents speak of considerable oats, barley, and peas as having been disposed of, the general opinion is that farmers prefer to feed their coarse grain rather than to sell at prevailing prices. In fact, it would seem as if the larger portion of the grain and fodder now grown on Ontario farms is raised with the object of feeding to live stock.

FALL PLOWING. Dry weather in the early part of the autumn rendered the ground hard and unfit for plowing in many sections of the Province, which threw much of the fall plowing considerably later than usual. However, the weather was more favorable for the work as correspondents were reporting, early in November, and the general opinion was that a full area would be turned under for the season. Several correspondents in Essex, Kent and Elgin, state that among other causes hindering the progress of fall plowing was the fact that extra time had to be given to husking the immense crop of corn.

LIVE STOCK AND THE DAIRY.

The May reports were thus summarized: "Reports as to the condition of live stock are in the main favorable, the animals being as a rule healthy and vigorous. Owing to the need of economizing fodder many of the cattle are lean. In many cases they went into winter quarters in poor condition by reason of the drouth. Though horses suffered in numerous instances from distemper and inflammation no contagious disease is noted. There has been active demand

for horses, and they have come through the winter in good condition. Sheep have done well, though some correspondents state that the tick is prevalent in their neighborhoods. There appears to be a decrease in the number of hogs kept, due no doubt to the heavy demand, a large number having been disposed of. Pigs seem to have been more subject to disease than any other stock, many suffering from crippling or rheumatism. In Middlesex a plague affecting the lungs and causing sudden death has made its appearance. The cold weather of the season has been highly unfavorable to parturition, and the death of an unusual number of calves, lambs and young pigs is noted. There was a sufficient supply of fodder in most parts, but a shortage in the Lake Erie Counties and some other sections."

August reports were to the following effect: "Local conditions in a majority of cases have been favorable to the growth of pasturage, and stock are consequently in a generally thrifty state. In many localities, however, the pastures are reported as dry and bare owing to continued drouth, though recent rains have had a beneficial effect in some neighborhoods. Generally speaking, there will be plenty of fodder to provide for stock through the winter, as—although hay is scarce and straw not as plentiful as usual—there will be an abundant supply of corn and roots. Dairy production has been generally up to the mark, though a shortage of milk has been noted by numerous correspondents, and butter is scarce and brings a better price than usual. The season has been especially good for dairying in the eastern portion of the Province, where the rainfall has kept the pastures in better condition than elsewhere. The health of the stock is excellent throughout. There is no mention of any serious disorder, and the only drawback to their condition seems to be the attacks of the horn-fly which is very prevalent in many places."

The following comments were made on the reports sent in for the November bulletin: Pastures in the early part of the autumn were affected by drouth, but later in the season they picked up to such an extent that the majority of the reports, more especially those from the eastern portion of the Province, spoke of the grazing as being particularly good for the time of the year. Live stock generally were described as being in good condition. The only case of sickness reported was an odd case of hog cholera in Essex. Cattle were considered perhaps rather thin—some say on account of the fly in summer—but otherwise they were thrifty, and sold well; so much so, in fact, that hardly as many as usual have been he'd over for winter fattening. Sheep were not referred to as generally as other stock but were favorably reported upon. An immense number of hogs have been sold this year, usually at about six months old. Many farmers, more especially in the western half of the Province, have adopted the plan of finishing off a number of young hogs at intervals during the season, thus avoiding the winter glut. On this account there were hardly as many on hand as at the same time last year. While hay will be scarcer than usual, coarse fodder will be plentiful, corn having been an immense crop. A larger number of silos have been erected this season than for some years past, the stave or tub shape appearing to be the most popular form at present, although a few correspondents report the building of concrete silos. In this connection there appears to be a preference for those varieties of corn, which ear well as compared with the more stalky sorts of southern corn formerly planted.

VALUES PER HEAD. The statistics of live stock will be found on pages 35-41. The following table gives the average value per head of stock on hand for the past nine years:

Classes of Live Stock.	1900	1899	1898	1897	1896	1895	1894	1893	1892
Horses:	\$	\$	\$	\$	\$	\$	\$	\$	\$

Ducks	31	29							
Other fowls	23	22	22	21	21	22	23	21	24

THE DAIRY. The state of the dairy industry has never been more satisfactory. Good fall pastures and an abundance of corn fodder have kept up the late flow of milk. Prices have also been good for both cheese and butter, more particularly for the latter, and while in the eastern part of the Province the cheese factory seems still to be preferred, in the western counties butter-making is coming more and more into favor. The cream separator is working a revolution indeed in dairying throughout the country, and it appears to have solved one of the greatest difficulties in the manufacture of butter. Several correspondents report butter plants being put into cheese factories for winter butter-making. An improvement in the quality of butter has been noted in almost every quarter of the Province. Shorthorn grades are still most largely used in Ontario dairies, although in the St. Lawrence and Ottawa counties the Ayrshire has decidedly the preference. Holsteins and Jerseys are also named as favorites for milk production.

CHEESE FACTORIES. The statistics of the cheese made in factories are given by counties in Table xxviii. (page 44), together with totals for the Province for ten years. There was a slight decrease in the number of factories operated, but the make of cheese was over four million pounds greater than in 1899. This, together with an average advance of 36 cents per hundred in the price of cheese, made an aggregate increase in the value of the output of \$900,000 over that of 1899, which season formerly held the highest record for Ontario. The sum of \$11,682,470 was paid to patrons for milk delivered at the factory. This amount, therefore, includes the cost of hauling, which may be estimated at \$1,000,000, or about \$1.50 per ton.

CREAMERIES. The following comparative table gives the statistics of the creameries operated in Ontario for the eight years 1893-1900, showing the quantity and value of butter made, the average number of patrons, the average price of butter per pound, and the amount paid to the patrons for milk or cream supplied.

Year.	No. of creameries in operation.	Butter Made.		Average No of Patrons.	Average price of butter per pound.	Milk to make one pound of butter.	Amount paid to the patrons for milk or cream delivered.
		Quantity.	Value.				
		lb	\$		cts.	lb.	\$
1900	308	9,041,468	1,819,290	21,809	20.12	23.96	1,589,291
1899	323	9,118,964	1,746,862	22,090	19.16	23.75	1,448,411
1898	282	9,006,992	1,632,234	22,741	18.12	23.99	1,294,220
1897	214	7,708,265	1,403,609	18,909	18.21	23.97	1,139,463
1896	170	6,033,241	1,101,232	12,245	18.25	24.13
1895	135	4,553,708	868,882	9,664	19.07	24.75
1894	115	3,162,550	662,297	8,298	20.94	23.79
1893	74	2,707,570	574,156	7,852	21.21	23.58

The number of creameries operated includes the skimming stations. A number failed to operate owing to the good cheese season.

The cash return to patrons of creameries averaged 73.4 cents per 100 lbs of milk, while the patrons of cheese factories received 85.5 cents. But it must be remembered that the former received also the skim milk and butter milk while the latter received but the whey.

POULTRY. The following appeared in the November bulletin: "Correspondents have had more to say than usual regarding eggs and poultry, and it is evident that this branch of the live stock industry is receiving closer and more intelligent attention than ever before. Egg production has been large this season, and good prices have prevailed. One correspondent in Kent mentioned a disease which attacked fowls in the head, mouth and throat; two others in the West Midland district spoke of hen cholera, and the fourth referred to a fatal disease among young turkeys in the county of Carleton; but with these exceptions the health of poultry has been reported as good all over the Province. Plymouth Rocks are mentioned with favor as a breed for the farm. Turkeys are being raised more generally than formerly, and geese are also regarded as paying, but ducks are not considered as profitable as other fowls. Some correspondents mention the fact that the canneries are considered a benefit to poultry raisers. It would seem as if farmers have at last come to see the great possibilities of the poultry industry, and are now regarding it as a most important line of agriculture."

BEES AND HONEY. The August bulletin contained the following regarding bees and honey: "Conflicting reports come regarding the condition of bees in the spring, some stating that there was considerable mortality during the winter. Swarming was reported to be great by some, while others say that there was very little swarming. Local conditions and skill in handling

hives account for varying reports regarding yields, which range from 10 to 75 lbs. The average may be safely placed at between 35 and 40 pounds, spring count. Most of the honey will be from clover, as linden was scarce; in fact many correspondents report practically no basswood bloom. No disease was reported, and as correspondents wrote bees were said to be in thrifty condition."

Correspondents had less than usual to say in November concerning the apiary. Nectar was abundant during the latter part of the season, and in many localities bees went into winter quarters with scant supplies, and might require feeding. Only one mention of foul brood was made.

LABOR AND WAGES.

The August bulletin thus dealt with the subject of farm labor and wages: "While the supply of farm labor appears to be fully adequate to the demand during the greater portion of the season, there is in most neighborhoods considerable difficulty in securing the extra hands needed at haying and harvest time. The tendency to dispense with hired help seems to be on the increase. There has been a decided increase in wages this season, but the reports as to the rates prevailing in different localities vary greatly. The general rate per day is from \$1 to \$1.50, with board, there being a very few instances in which a lower figure is named. The monthly rate, where men are engaged for the season—that is, from six to eight months—is usually from \$16 to \$20, with board, but for engagements of one or two months only the rates as a rule is something higher—\$30 and \$35 being paid in some instances. The scale appears to be generally higher in the west than in the east, with the exception of those counties adjacent to the lumbering region where the competition of the lumber camps tends to keep up the price of farm labor."

The November returns were to the following effect: "Correspondents are divided as to the supply of farm labor, some claiming that there was sufficient, others holding that there was a scarcity. It would appear, however, that skilled agricultural laborers were in demand in every portion of the Province. Several correspondents report the fact that the temporary return of young men from Manitoba will meet all the requirements of the present. Regarding the question of the rise or fall of wages correspondents also vary in opinion. Some state that rates must fall, while others state that wages will go up. Others, again, hold that there will be comparatively little change, as farmers cannot afford to pay more, and that with the increased openings in factories and other manufacturing concerns men will not work for low wages on the farm. Touching the matter of rural domestic service there is an almost unanimous report of a scarcity of this class of workers. The reasons given are many; in some cases the employees are criticised, in other cases the employers. The situation is one that deserves attention. It is manifest that young women as a class prefer almost any other kind of employment to that of domestic service on a farm. The reasons why should be carefully considered by all concerned."

The following table gives the average rate of wages paid farm laborers by the year and by the month, with and without board, for ten years, together with the average for nineteen years; also the monthly wages paid domestic servants on the farm:

Farm Laborers.	1900	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.	1882-1900.
Per year in yearly engagements:	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$
With board	155	149	148	144	144	150	156	160	156	158	157
Without board ..	243	243	246	236	243	246	247	255	253	257	250
Per month for working season:	\$ c.	\$ c.	\$ c.	\$ c.	\$ c.	c.	\$ c.	\$ c.	\$ c	\$ c.	\$ c.

HAY AND CLOVER—ALL FIELD CROPS.

TABLE XVI. Showing by County Municipalities of Ontario, the area, produce and market value of the crop of Hay and Clover for the year 1900, together with the totals for the Province for the past ten years and the averages for the nineteen years 1882-1900; also the averages per acre. It also shows the aggregate area and market value of all the field crops enumerated in Tables ix-xvi.

Counties and Districts.	Hay and Clover.					All Field Crops.		
	Acres.	Tons.	Yield per acre.	Market value.	Market value per acre.	Acres.	Market value.	Market value per acre.

	PAGE.
RURAL AREA ASSESSED: Showing by counties as taken by municipal assessor for 1901, the total <i>area</i> , acres <i>cleared</i> , acres in <i>woodland</i> and acres in <i>swamp, marsh, or waste lands</i> ; also totals for the Province for the ten years 1892-1901	24
STATISTICS OF FIELD CROPS: Showing by counties the area, produce and market values for the year 1901, together with totals for the Province for the past ten years, and the averages for the period 1882-1901; also the averages per acre.	
Fall Wheat	25
Spring Wheat	25
Barley	26
Oats	26
Peas	27
Beans	27
Rye	28
Buckwheat	28
Corn	29
Potatoes	30
Carrots	30
Mangel-wurzels	31
Turnips	31
Hay and clover	32
All field crops as above	32
RATIOS OF AREAS UNDER EACH CROP IN 1901 PER 1,000 ACRES OF CLEARED LAND	33
PASTURE—ORCHARD—VINEYARD—APPLES	34
STATISTICS OF LIVE STOCK: Showing by counties the number and value of stock on hand July 1, 1901, together with the number and value of those sold or slaughtered during the year ending June 30, 1901; also comparative totals for the Province.	
Horses	35
Cattle	36
Sheep	37
Hogs	38
Poultry	39
WOOL: Showing by counties the clip in 1901	40
BEEES: Showing by counties the number of colonies and value (including outfit)	40
VALUES OF FARM PROPERTY: Showing by counties the value of <i>farm land</i> , <i>farm buildings</i> , <i>implements</i> , and <i>live stock</i>	41
Farm property values per acre occupied	42
Value of buildings, implements, and live stock per acre cleared	42
Rental of leased farms	42
MARKET PRICES: Showing for the leading markets of Ontario the average prices of agricultural products for the last six months of 1901, with comparative market prices for the Province for the past ten years, and the averages for the twenty years period	43
CHEESE FACTORIES: Showing by counties the number of cheese factories in operation in 1901, the quantity and value of cheese made, the number of patrons and the amount paid to patrons, together with the totals for the Province for the past ten years	44
AGRICULTURAL STATISTICS OF THE UNITED STATES	45
CROPS IN MANITOBA AND NORTH-WEST TERRITORIES	46
PART II.—CHATTEL MORTGAGES.	
CHATTEL MORTGAGES ON RECORD: Showing by counties the number and amount of chattel mortgages on record and undischarged on December 31, 1901, against (1) all occupations, (2) farmers; also totals for the Province for ten years	47
INDEX	48

ONTARIO BUREAU OF INDUSTRIES.

PART I.—AGRICULTURAL STATISTICS.

THE WEATHER.

The success of a crop depends upon the suitability of the plant to its environment, the quality of the seed, the nature of the soil, and the system of tillage practised; also upon the weather conditions prevailing during the period of growth. The records of temperature, rainfall, snowfall, and sunshine in the Province for a series of years are, therefore, full of interest and instruction to those who would study the agricultural conditions of the country.

TEMPERATURE. The following table gives the average temperature of the Province by months, and for the six months April-September inclusive—[practically the growing* season—for the past ten years, and also the average for the twenty years 1882-1901 :

Month.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1882-1901.
	°	°	°	°	°	°	°	°	°	°	°
January	19.0	21.9	18.7	20.2	19.5	18.4	17.3	23.1	10.3	17.0	17.7
February	13.0	17.1	15.2	22.0	21.8	19.2	14.5	16.9	14.7	21.9	17.9
March	26.9	20.5	25.8	35.6	29.0	21.2	21.5	34.9	26.4	25.2	25.4
April	45.0	44.8	44.5	42.1	42.7	46.3	43.3	44.3	38.7	40.3	41.8
May	54.6	54.6	55.7	55.5	52.9	60.1	56.9	53.7	52.2	52.2	53.7
June	65.8	64.1	64.8	65.6	60.9	64.8	68.0	66.1	67.6	65.4	64.3
July	71.9	68.2	67.5	70.2	71.9	68.8	65.5	69.1	68.3	68.3	67.9
August	67.5	70.9	68.5	67.7	64.2	67.2	65.3	64.0	66.1	66.6	65.9
September	60.1	62.3	56.2	61.8	60.8	56.8	60.5	61.1	56.0	58.8	58.6
October	48.5	55.2	50.0	48.7	50.1	43.4	41.4	48.8	48.2	46.6	46.7
November	31.9	35.3	38.0	34.9	34.9	37.8	34.5	31.6	35.1	33.1	34.8
December	22.7	24.7	25.1	22.8	24.6	24.1	25.8	27.7	20.7	21.8	24.2
Annual mean	43.9	45.0	44.2	45.6	44.4	44.0	42.9	45.1	42.0	43.1	43.2
Mean for six months, } April to September. }	60.8	60.8	59.5	60.5	58.9	60.7	59.9	59.7	58.2	58.6	58.7

The mean annual temperature was 43.9°, or 1.1° below that of 1900, and .7° above that of the twenty years 1882-1901. The mean for the six months April-September was 60.8°, or exactly the same as that of the preceding year, although 2.1° above that of the twenty years period. February, November, and December were the only months which showed a relatively low range of temperature, the other nine months going more or less over their respective averages. The mean temperature for July was 71.9°, or 4° above its average for the twenty years. This high average temperature, while equalled by that of July in 1897, has never been reached by any other month in the years comprising the table. April also showed an unusually high increase in temperature compared with its average for the twenty years.

PRECIPITATION. The fall of rain and snow in the winter months is given in the following table for ten years, together with an average for the twenty years 1882-1901. An inch of rain is the equivalent of ten inches of snow :

Year.	November.		December.		January.		February.		March.		Total for five months.	
	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.	Rain.	Snow.
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
1901.....	2.99	10.4	0.51	8.6	0.58	18.8	R	17.6	1.60	13.1	5.68	68.5
1900.....	1.13	1.0	2.15	14.5	0.72	15.8	1.68	26.8	0.53	18.8	6.21	76.9
1899.....	1.67	9.6	0.74	24.6	1.50	13.2	0.76	8.0	1.78	22.1	6.45	77.5
1898.....	3.40	8.9	1.73	17.5	1.47	18.2	0.60	18.9	2.42	1.0	9.62	64.5
1897.....	2.51	6.2	0.37	9.6	1.15	17.3	0.89	14.1	1.52	12.7	6.44	59.9
1896.....	2.47	7.7	2.22	13.2	0.65	17.1	0.46	24.5	0.74	11.4	6.54	73.9
1895.....	0.78	11.4	1.49	6.6	0.77	31.3	0.08	12.0	0.41	10.8	3.53	72.1
1894.....	1.97	9.9	1.85	26.2	0.91	14.0	0.59	15.1	1.15	4.8	6.47	70.0
1893.....	2.09	10.8	0.68	11.6	0.43	25.5	0.73	24.3	1.19	5.4	5.12	77.5
1892.....	3.91	7.4	1.84	6.4	0.44	21.7	0.66	16.7	0.50	7.7	7.35	59.9
1882-1901.....	2.17	8.5	1.31	15.0	1.03	20.2	0.91	16.8	1.10	11.9	6.52	72.4

The rainfall of the Province for the five months averaged 5.68 inches, or .84 inch less than the average for 1882-1901, and the snowfall was 68.5 inches, or 3.9 inches less than the average. The most striking feature of the table is that during the three consecutive months December, January, and February the rainfall was only about one-third that of the normal, being but 1.09 inch as compared with an average of 3.25 inches for the twenty years. While December experienced the lightest snowfall since 1895, practically all the precipitation of February was snow.

The growing season for most crops, however, is limited to the six months April-September, and the following table shows the rainfall for the past ten years, and also the averages for the twenty years 1882-1901 :

Months.	1901	1900	1899	1898	1897	1896	1895	1894	1893	1892	1882-1901
	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.	in.
April.....	2.26	1.44	1.10	1.45	2.52	1.26	1.49	0.99	2.61	1.15	1.56
May.....	3.67	2.03	3.43	2.43	3.38	2.10	2.36	5.72	3.35	3.64	2.88
June.....	2.14	2.83	2.46	2.83	2.83	2.39	1.37	2.32	3.15	4.54	2.77
July.....	3.90	3.96	2.78	1.11	5.36	2.79	2.02	1.72	2.44	2.73	2.69
August.....	2.78	2.15	0.81	2.64	2.62	2.86	2.81	0.84	2.67	4.26	2.52
September.....	2.78	2.73	3.72	2.94	0.83	4.47	2.67	3.73	1.94	3.84	2.63
Total for six months.....	17.53	15.14	14.30	13.40	17.54	15.87	12.72	15.32	16.16	20.16	15.05

The total precipitation for the six months was 17.53 inches, which was 2.38 inches more than the average for the twenty years. June is the only month in the table showing a decrease

in rainfall compared with its own average. June is also credited with the least rainfall for the year, although April is by far the driest month of the six for the twenty years.

SUNSHINE. In the following table the averages of sunshine are, as usual, derived from the records of the weather stations at Woodstock, Toronto, Barrie, Lindsay and Kingston.

Months.	Sun above horizon.	1901	1900	1899	1898	1897	1396	1895	1894	1893	1892	1882- 1901
	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.	hrs.
January	285.7	59.7	77 1	90.8	76.2	70.4	52 3	73.0	74.5	64.0	72.8	68.7
February	291.4	115.7	109.8	112 8	69 3	93.7	104.0	110.2	124.2	93.8	93.6	94 9
March	369.9	96.9	161.4	133.2	157.5	148.3	188.1	179.6	127.5	150.4	174.9	148.7
April	406.4	154 5	214.0	223.2	230 2	174.2	180 3	195.1	212.9	148.5	215.2	193.0

August	434.5	208.0	271.4	262.1	225.2	262.4	262.6	228.0	207.3	259.0	231.6	240.8
September	376.3	199.7	190.0	164.4	202.4	237.1	168.0	194 2	156 4	175.8	218.2	193.4
October	340.2	163.0	161 0	141.7	118.2	161.0	135.5	149.0	129.4	150 0	145.6	134.8
November	236.9	80.3	82.4	78.6	89.0	60 8	69.8	79 3	64.7	81.3	35.1	68.1
December	274 3	62.9	46.6	60.2	56.6	40.6	80.8	57.1	65.5	55.8	56.6	56.8
Total for the year	4463.3	1852.7	2136 2	2058 3	1665.8	1923.9	2043 4	2036.3	1864.9	1921.7	1925.5	1936.5
Total for 6 months April-Sept.	2614.9	1274.2	1494.9	1441.0	1399.0	1349 1	1412.9	1388.1	1279 1	1326.4	1346 9	1264 5

There were only 1852.7 hours of sunshine registered in 1901, or 233.5 hours less than in the preceding year, which was one of unusual brightness, and 83.8 hours less than the average for 1882-1901. The sunshine for the six growing months April-September amounted to 1274.2 hours, or 90.3 hours less than the average for the twenty years, and 220.7 hours less than were registered in 1900. The harvest months of July and August did not equal their averages.

VEGETATION.

Correspondents who wrote a few days before the the 1st of May considered the season as rather backward, but those who sent in their reports after that date spoke of rapid growth in both field and forest, which had brought vegetation rather more forward than usual. The eastern portion of the Province appeared to have been relatively more advanced in this respect than the west. Meadows in the beginning of May afforded excellent pasturage for sheep, and a fair bite for other live stock. An Essex correspondent writing on May 6th, stated that peach trees were then in profuse bloom.

SPRING SEEDING. Taking the Province over, spring sowing may be described as being about half done on the first of May, although in a few localities it was claimed that the work was practically completed by that time. Early sown grains found an excellent seed-bed, more especially on high and well drained lands; but a heavy snow and rain storm, ranging from the 19th to the 21st of April, gave spring operations a decided set back by flooding low-lying places, and not only preventing further sowing for a week or so, but in some instances drowning out a portion of the crop already put in. Notwithstanding this drawback, the prospects for spring

crops were on the whole encouraging on May 1st. A few correspondents reported potatoes a having been planted, which was somewhat earlier than usual for that crop.

THE GRAIN CROPS.

FALL WHEAT. The reports regarding the newly planted fall wheat were thus summarized in the bulletin issued in November, 1900: "Correspondents in the fall wheat counties of the western part of the Province are divided as to the area of new wheat compared with last year, although it is probable that decreases and increases will about balance themselves, and give an average acreage. In the eastern part of the Province there is a decided gain in the area grown. The period of sowing ranged from the last week of August to the third week of October, the bulk of the crop being put in about the middle of September. While some complain of a dry seed bed, the majority of reports speak of a good catch, and in a number of instances the growth has been so rank that cattle have had to be turned into the fields to eat off the tops of the plants. In the western half of the Province the Hessian fly has been attacking the new wheat, but in the counties east of York little or no mention is made of this pest. Over forty different sorts of fall wheat are mentioned as growing, the favorite varieties being Dawson's Golden Chaff, Clawson, and Genesee Giant."

In the Annual Report of the Agricultural College for 1900, Prof. W. Lochhead thus referred to the visitation of the Hessian fly: "Many complaints reach us regarding the prevalence of the Hessian fly, and observations show that it is prevalent in all the counties along Lake Erie, viz.: Essex, Kent, Elgin, Norfolk, Haldimand, Welland, and Lincoln. The wheat crop of Middlesex, Lambton, Huron, Oxford and Brant have also been badly attacked, and occasional complaints have come from Perth and Simcoe, Bruce, Grey, Wellington, Waterloo, Dufferin, but the counties east of Toronto are practically free. The long open falls of the past two years have been very favorable to the breeding of Hessian flies. Reports of the dates of sowing of the fall wheat in the infected districts make it quite clear that the time of the sowing of the seed should be postponed till the last week in September. Where such late sowing has been done the crop has escaped the fly. It is often maintained that seed sown after the first week in September does not produce a yield equal to that produced from seed sown prior to that date; but, on the other hand, it does not take many Hessian flies to make a material reduction in the yield of an infested field."

But for the injury done by the Hessian fly in the southwestern part of the Province, fall wheat could be classed as a most promising crop in May. Unfortunately every county south of a line drawn from Hamilton to Sarnia had suffered considerably from the fly, and a few townships a little to the north had also been visited by the pest. Some fields had to be plowed up on that account, but not so large an acreage as the poor condition of the wheat would warrant, on account of the grain having been "seeded down" with grass. Outside the counties affected by the Hessian fly, fall wheat was then looking well. Some injury was done by ice on low-lying or poorly drained lands, but as a rule the crop presented a luxuriant appearance—the growth having been almost too rank in places in the fall—and several counties were expected to give yields well up to the record.

The August bulletin contained the following: "Returns just to hand show that the injury done by the Hessian fly in the Lake Erie group of counties has been so great that in many instances the yield per acre is as low as only five bushels per acre, although in the same localities larger yields per acre have also been returned. The fly has done comparatively little damage in the Georgian Bay counties, in Bruce, and in the central and eastern portions of the Province. There has been more or less just complained of, the hot, damp weather prevailing at times being favorable for its development. In the reports as to the quality of the grain,

frequent mention is made of the kernel being shrunken, the intense heat of the early part of July, it is averred, causing premature ripening. Harvesting took place rather earlier than usual. While a number of correspondents speak of the crop being cut and housed in excellent condition, others complain that the rains prevailing at the latter part of harvesting, together with the great heat, caused some of the grain to sprout in the shock. Very little threshing had been done as correspondents wrote, but it is expected that returns will range from 5 to 40 bushels per acre."

According to November reports, the crop was a good deal below the average from various causes. In the west the ravages of the Hessian fly did great injury, and much of the surviving grain was light in weight on account of the extreme heat and drouth of June and July. Rust, cockle, and chess were also mentioned as among the season's drawbacks, and in some western localities the grain was spoilt by wet before it could be harvested. Reports from the eastern section—which was free from the Hessian fly—were somewhat more favorable, especially as regards the Ottawa valley and East Midland counties, where the crop was a fair one, the principal causes of injury being the excessive early rains and drouth before harvest, owing to which much of the grain was shrunken. There had been no noticeable damage from frost, but a devastating hail storm destroyed a large area of grain in Carleton county.

THE NEW FALL WHEAT. "The bulletin sent out in November, 1901, said: "There has been a very considerable and well nigh universal decrease in the acreage devoted to fall wheat, owing to the ravages of the Hessian fly. In order to secure the new crop against the pest, sowing has been deferred by many farmers to a later period than usual. While the bulk of the seeding was done during the first three weeks of September, a large number postponed the work until the following month. The condition of the ground was generally good, although dry in many localities, and where the young plants are visible they present as a rule a healthy appearance. Rain, however, is badly needed in some neighborhoods. In several western counties, more especially in those bordering on Lake Erie, the earlier sown wheat has been attacked by the Hessian fly which occasioned much injury. The principal varieties of fall wheat sown were Dawson's Golden Chaff, Red Clawson, and Genesee Giant."

SPRING WHEAT. This crop is grown chiefly in the eastern half of the Province, correspondents in the western counties having comparatively little to say about it. According to the August returns the yield was a variable one, although a large number of correspondents spoke of good returns. The crop, like fall wheat, suffered considerably from rust, and from an insect which did a good deal of injury by cutting the stock at the joint. Some also complained of the Hessian fly. Only a few had cut their spring wheat as correspondents wrote, but the bulk of the standing crop was then reported to be in fair condition.

November reports stated that but little spring wheat was grown this year in the western part of the Province, and where cultivated, the crop was a light one, owing to the same causes as injured other cereals. The yield in the eastern section was fair in most neighborhoods, but the grain was frequently small and shrivelled owing to the drouth.

BARLEY. The August bulletin had the following: "As in the case of other cereals, correspondents are not nearly agreed regarding the yield and quality of barley, although it is likely that it will be a better crop relatively than either fall or spring wheat. It has suffered but little from insect pests, and while some correspondents report the grain as discolored by rains during harvesting, others claim that the color is good, although the berry is rather small in size. The wet weather of May, and the excessive heat during a portion of July, are given as the chief causes of drawback to the crop. The straw is reported as short in length in various localities. Harvesting was general from the 15th to the end of July, although some fields were being cut as correspondents wrote during the first week of August."

November reports as to the barley crop were very variable. It suffered somewhat from the Hessian fly, and to a greater extent from the drouth, which resulted in premature ripening, rendering the grain light and the straw short. There was considerable difference in the sample, which many described as bright in color, while, in other neighborhoods, it was badly colored and of a low grade.

OATS. August returns regarding this crop were far from being unanimous. In various sections of the Province, more particularly in some of the Lake Ontario counties, large returns per acre were reported, but in some other localities the reverse was claimed. The crop also suffered from the abnormal heat of July, which hastened ripening, and in many cases prevented the heads from filling out thoroughly. Correspondents in eastern Ontario spoke of the crop as having ripened very unevenly, which delayed harvesting in some instances. Only a few had cut oats up to the first week of August. The straw in many cases reported was not as long as usual.

According to November statements the oat crop was unfavorably affected, especially in low lying ground, by the heavy rains in the spring, and injured by the extreme heat of midsummer and, as a consequence, much of it was light in the grain with short straw. The early sown crops as a rule yielded much better than those sown later in the season. In some cases injury was caused by rust. This crop appeared to have done slightly better in the Lake Erie and East Midland districts than elsewhere.

PEAS. The August reports regarding peas varied considerably, except on the one point, that the crop was more or less injured by the "weevil" or "bug," although where grass peas were sown they escaped attack. Yields were expected to range from 10 to 30 bushels per acre. While some spoke of the straw as being of good quality, though rather short, others complained that it had been blackened by rain and heat. A good deal of the crop had yet to ripen as correspondents wrote.

The November bulletin had the following concerning peas: "Owing to the ravages of the pea bug in past years, a much smaller area was devoted to this crop than usual, and the injury done by the pest, together with the damage done by dry weather, have resulted in a small yield. Reports vary little as to locality, being generally unsatisfactory as regards the ordinary varieties. Grass peas, however, which have been largely raised in many neighborhoods, have as a rule done well."

BEANS. Outside the county of Kent beans are not largely grown as a field crop. The beans were beginning to pod when correspondents wrote on the 1st of August, were in good condition owing to timely rains, and gave promise of an excellent yield.

According to November returns beans were, on the whole, a fairly good crop, though, owing to dry weather, the yield was a good deal decreased in many parts, the pods not being well filled.

RYE. Judging by the reports of correspondents in May, very little rye was being raised for the grain, most of the crop being cut for green food. Where grown, however, winter rye was described as looking well.

The August bulletin said: "Comparatively little rye is raised for the grain in this Province, the crop being used largely for soiling and other purposes. Where allowed to mature, it has turned out well in most cases, both as regards grain and straw, although in some instances affected by the great heat occurring in July."

The November reports were to the effect that rye appeared to have done better than the other cereals, the yield being generally fair though somewhat light in grain in many localities owing to drouth.

BUCKWHEAT. The yield and quality of buckwheat varied considerably, and the general result was about an average. The crop was generally well harvested, though in some places injured by rains.

CORN. The August bulletin said of corn: "Several correspondents lay stress upon the fact that this crop has become a most important factor in connection with cattle feeding. The advent of the silo has made corn one of the staple fodder crops of Ontario. Despite the fact that planting was delayed in many quarters owing to wet weather then prevailing, the crop has made good headway, and taken as a whole gives promise of doing well should early frosts not appear. Complaints are made of injury by crows and blackbirds, but otherwise the crop appears to have escaped damage."

According to November reports the season was, on the whole, a favorable one for corn, notwithstanding the drawbacks of cold, wet weather in the spring and subsequent drouth. The yield was large wherever this crop was grown, and the quality generally good both for husking and fodder purposes. In but few localities were there any losses by frost reported, the crop having, as a rule, been saved in good condition, though there were exceptional cases of damage by smut.

HAY AND CLOVER.

As correspondents wrote under date of May 1st, it was generally considered that clover had come out of the winter in about the same condition as it had entered it, the damage done by "heaving" and ice being very small. No mention was made by injury to the crop from insects. Clover fields had been given a good start by timely rains and warm weather, and were then presenting an excellent appearance.

The August bulletin had the following regarding hay and clover: "This is, without doubt, the most successful crop of the season, both as to quantity and quality. The average yield for the Province will be much above the average, particularly in the St. Lawrence and Ottawa counties, where, many correspondents assert, the hay crop is the heaviest ever cut in that part of the Province. As a whole, the crop has been well saved, ensuring an abundance of excellent fodder, although, in a few sections, more especially in the Northern Districts, rain did more or less damage. Several correspondents speak of the splendid form in which some old meadows showed up. Clover did better than timothy, and the second crop is looking well. Cutting extended from the last of June to the third week of July."

CLOVER SEED. The following appeared in the November bulletin: "Both red and alsike clover have done well, the yield of seed being unusually good. The stalks are generally short, but the heads are well filled and the seed plump. The drouth is responsible for a shortage in some quarters, while the midge has affected the crop injuriously in a small percentage of instances. Very little damage was occasioned by frost."

FIELD ROOTS.

POTATOES. Judging by the number of correspondents who reported in August "one of the worst years yet for potato bugs," the beetle must have done a lot of injury. This coupled with the dry weather prevailing during the previous month or more, told greatly against the chances of the crop; and while some correspondents then spoke of a fair, and even a good prospect, the bulk of those reporting described the tubers as small in size and likely to be considerably below the average in yield. This was especially so in the case of early planted potatoes. It was pointed out, however, that recent rains had greatly improved the outlook for the crop. No blight had been reported up to August, and several correspondents referred to this act with much satisfaction.

November returns were thus summarized in the bulletin issued early in that month : "The report of correspondents as to the potato crop are very variable. In the eastern section the yield is a light one in most neighborhoods, a great proportion having been destroyed by rot, especially on clay soils and low-lying lands. More favorable accounts come from the west, where this kind of disease is not nearly so prevalent. In that part of the Province, late sown potatoes have generally yielded well, while those put in early in the season have suffered from dry weather or frost, and the bug has been in evidence as usual. The crop has practically all been secured."

CARROTS. This class of roots was seldom referred to by correspondents in the reports sent in at the beginning of August, although what little was said indicated that they were doing well where grown. November returns were to the effect that the season had been a good one for carrots, and that the crop had been housed in excellent condition.

MANGEL WURZELS. This crop did well, and the opinion was expressed that mangels appeared to be growing in favor, it being claimed for them that they were better able to withstand the drouth than turnips. The yield was a large one, and the crop was gathered without any drawbacks.

TURNIPS. Reports concerning turnips varied considerably during the early history of the crop. In many quarters there was poor germination of seed, and the fly also threatened loss, but in other sections a large crop was promised. November returns were generally favorable, although many of the turnips were considered to be small in size. Most of the crop was put by in good condition by the 1st of November.

SUGAR BEETS. In only a comparatively few localities have sugar beets been produced, but if the results continue to be as favorable as those of the season of 1901 they are certain to be more extensively sown. The output has been good as regards both bulk and quality in almost every case.

FRUIT AND FRUIT TREES.

The early part of the season opened rather auspiciously for fruit, as will be seen by the following from the May bulletin : "In the western portion of the Province, where most of the orchards are to be found, fruit trees have come through the winter in splendid condition. In the counties along the St. Lawrence, however, an "ice storm" in the spring had the effect of breaking off many of the branches, and in some cases killing the trees. A number of fruit trees in the northern districts are also reported to have died, although the cause has not been given. Orchards were coming into bloom as correspondents wrote, and nearly every class of fruit was giving promise of a generous yield should frost and heavy rains keep off during the period of "setting," although some state that it will be a comparatively "off year" for apples. A number of correspondents in various parts of the Province refer to the presence of the tent caterpillar, but this pest does not appear to be as common as it was a year ago. Odd mention was made of injury to fruit trees by field mice."

August returns showed that it was going to be an "off year" indeed for apples and cherries, notwithstanding their excellent prospects at the time of blossoming. The midsummer bulletin said : "Reports regarding apples are far from satisfactory. Although there was plenty of bloom in many localities during spring, much of the fruit did not set, and later on most of the apples fell off before maturing. There is not likely to be half an average yield. Several correspondents, however, point out that the Spy is doing better than any other of the winter varieties. Pears may be ranked as fair in quality and about an average in yield. Only one correspondent speaks of blight. Peaches will be a fair crop in the western Lake Erie Section, but will hardly do so well in the Niagara district. No mention has been made of disease in this connection. Plums range in yield from an average to failure, according to locality and care. The cur-

culio has been very active, and some of the crop has rotted before ripening. Cherries have suffered from rotting on the tree, and complaints of black-knot are also made, but in some of the western counties this fruit did very well. Grapes promise a good yield, notwithstanding the poor start in the spring owing to the cold and wet conditions then existing. Small fruits as a class did well, although raspberries suffered from the dry weather of July."

The November bulletin said: "Fruit trees are in good condition generally, and there has been an unusually heavy growth of wood. The season has been a poor one for fruit, more especially for apples, the staple orchard crop, of which there is a shortage everywhere. This appears to be due to a combination of causes, the principal enumerated being wet weather during the blossoming season, heavy winds, and the attacks of the tent caterpillar, codling moth, borer, and other insect pests. Shipments have consequently been light, many localities not having enough for local consumption. Insects also have proved injurious to the other fruits, but many correspondents note a plentiful supply of plums, pears, and peaches. Cherries and small fruits did fairly well in many places, though the quality was very variable. Grapes were in the main a good crop. The reports emphasize the need of spraying, as, wherever this process was followed, the losses by insect pests were considerably lessened."

MISCELLANEOUS.

FLAX. This crop has done well where raised, but it is not so largely grown as formerly. It has succeeded better this season in the Lake Huron counties than in the West Midland group.

HOPS. Correspondents had very little to say about hops. The few observations made were to the effect that where grown the crop is in good condition.

LUCERNE. This crop is increasing in favor, more especially in Western Ontario, where it is used as green feed to supplement pastures during June, July, and August.

RAPE. A large number of farmers are growing rape every year. Sheep and young cattle, it is claimed, do well upon it, and some also feed it to hogs with good results. The season was a favorable one for the crop.

THRESHING AND MARKETING. The following is from the November bulletin: "Threshing has been carried on actively and in many sections the work has practically been completed. Peas were marketed early on account of the bug, and a large quantity of oats have been disposed of; but wheat has not been moving very lively, and much of the barley is now fed on the farm."

FARM IMPROVEMENTS. November reports regarding farm improvements were to the following effect: "Good progress has been made in underdraining, more especially in the west, and some of the Ottawa River counties. In many localities where little advance is noted, many of the farms have been previously drained. In nearly all neighborhoods the supply of tile was sufficient. The supply of skilled labor was generally adequate to the requirements, as in most cases the work was done without engaging special help. Tile draining machines are very little used, and are not considered as satisfactory as hand labor. Almost everywhere wire fencing is rapidly taking the place of rail and other wooden fences, and in most localities, considerable improvements in the character of houses and barns are noted."

FALL PLOWING. The dry weather which characterized the fall in most parts of the Province considerably interfered with the progress of fall plowing, rendering the soil hard and dry, more especially in the Lake Erie counties, where the work was reported as backward. In other localities, greater advances had been made, many farmers having nearly or quite completed their plowing at the time correspondents wrote, under date of November 1st. Apart from the prevalent drouth, the weather was highly favorable for the work.

LIVE STOCK AND THE DAIRY.

May returns were to the following effect: "All classes of live stock came through the winter in good condition. Horses especially look well, although there have been many cases of coughs and other light forms of distemper reported. Cattle were rather thin, but on the whole are healthy. A few cases of trouble in calving have been reported, together with an odd mention of "blackleg" in Leeds and Renfrew, and of lumpy-jaw in Huron. Sheep are reported to be in particularly fine form. Scab has disappeared, and lambs are plentiful and vigorous. Swine have commanded more attention than ever before, owing to encouraging prices; but while litters have been large there have been heavy losses among these young pigs, and during the latter part of the winter many hogs suffered from a form of rheumatism or "stiffening," which, however, appeared to wear off when the animals were turned out in the spring. In most parts of the Province there was an abundance of fodder for live stock during the winter, although a few farmers are said to have been compelled to buy feed in order to supplement their supplies. Some correspondents claim that the bacon industry has somewhat lessened the number of beefing animals raised by Ontario farmers; yet it would also appear as if all classes of live stock are receiving better care than ever before."

Pastures were in prime condition in the early part of the season, but fell off about the second week in July, when the warm weather began to dry up the grass. However, heavy rains were falling as correspondents wrote, about the beginning of August, and the prospects were that pastures would soon pick up again. It was then thought that the milk supply, which had fallen off correspondingly with the condition of pastures, would likely be materially improved. The decline in the milk flow was not attributable to the dry pastures only, but also to the teasing of the horn fly, which was most annoying during the warm term, and helped to get cattle somewhat out of condition. Prices for both cheese and butter were most encouraging to dairymen, and the bulk of correspondents were cheerful as to the outlook for fall and winter supplies, there being an abundance of hay, an excellent promise of corn, and a fair chance yet for roots, although straw, it was estimated, would be a short crop indeed.

The November bulletin thus described the situation: "Pastures were in good condition during the early fall in the eastern portion of the Province, although in the more western counties comparatively bare fields were common. Live stock of all kinds are in an unusually healthy state, an odd case of cholera in hogs being the only disease reported. While a few correspondents describe cattle as being rather thin, most of those reporting consider them to be in good average condition. In some localities the horn-fly was annoying. Some correspondents state that sheep are not kept in as large numbers as formerly, but they appear to be in good shape where raised. Swine are being fed in large numbers, and are being turned off more or less steadily the year around at weights ranging from 180 to 220 pounds. One correspondent characteristically refers to the hog as the "farmer's Klondike." The supply of fodder is said to be ample for the winter, hay, corn, and roots being abundant, although there has been a general shortage of straw. The silo is still growing in favor, an unusual number having been built in the West Midland district this year. Several correspondents speak approvingly of the husker and shredder as a means of preparing corn for fodder. Taking them all together, reports concerning live stock may be considered as satisfactory."

POULTRY. Judging by the remarks of correspondents it would seem that farmers are taking much more interest in poultry raising. More care is now being taken in the selecting, feeding, housing, and the general handling of fowl, and the question of profit and loss is being more carefully studied. The Plymouth Rock appears to be the most popular breed of hens. Turkeys are also being raised in larger numbers than ever. Several correspondents point to the fact that more poultry are being disposed of than in former years. The general condition of all classes of fowl may be described as good, although a correspondent in Wellington referred to a disease

resembling blind staggers and another correspondent in Prince Edward described a disease, which he said was not hen cholera, where the fowl were attacked, got "dumpish," and died within forty-eight hours.

VALUES PER HEAD. The statistics of live stock will be found on pages 35-41. The following table gives the average value per head of stock on hand for the past ten years :

Classes of live stock.	1901	1900	1899	1898	1897	1896	1895	1894	1893	1892
Horses :	\$	\$	\$	\$	\$	\$	\$	\$	\$	\$

BEEES AND HONEY. The August bulletin had the following regarding the apiary : "Little or no disease has been reported among bees. There has been plenty of swarming, and stocks have been strong and active. But for the dry weather of July, an immense yield would have been recorded, and some apiarists did remarkably well. The average yield, however, will not go over 50 pounds per hive. Some excellent basswood honey is reported, while a fair share of clover honey was also gathered. Eastern apiaries did better than those in the west."

November reports were to the effect that very little disease of any kind had been reported among bees. The average yield of honey was estimated at about fifty pounds per colony, a considerable addition of buckwheat honey having been made in some sections of the Province to the clover and basswood stock already on hand. Bees were expected to go into winter quarters with a fair amount of stores, and as prices have been good, owing to the scarcity of fruit, the season of 1901 may be regarded as having been a good average one for the apiary.

THE DAIRY. The following also appeared in the November bulletin : "The season of 1901 has been a fair one for dairying, although some correspondents complain of the low price prevailing for cheese. Creamery plants have been put into a number of cheese factories, cheese being made from May to October, and butter during the winter months. The cream separator is said to be of great assistance to those making home-made butter. Both creamery and home-made butter are described as having been of good quality as a whole, and prices as a rule have been satisfactory. Many farmers engaged in dairying are now systematically putting in ice in order to meet conditions of temperature during mid-summer. Shorthorn grades are still most commonly found in Ontario dairies, although Holstein and Jerseys are coming into favor ; while Ayrshires retain supremacy in the cheese-producing counties along the St. Lawrence."

CHEESE FACTORIES. The statistics of the cheese made in factories are given by counties in Table xxvii (page 44), together with totals for the Province for ten years. There was a slight decrease in the number of factories operated but the make of cheese was 134,942,517 lbs., or over seven million pounds greater than in 1900. The value, however, was less by \$750,000.

owing to a falling off of \$1.10 per 100 lbs. in the market price. The amount paid to patrons for milk, including delivery to the factory, was \$10,814,538, or 75.4 cents per 100 lbs.

CREAMERIES. The following comparative table gives the statistics of the creameries operated in Ontario for the nine years 1893-1901, showing the quantity and value of butter made, the average number of patrons, the average price of butter per pound, and the amount paid to patrons for milk or cream supplied :

Year.	No. of creameries in operation.	Butter made.		Average No. of patrons.	Average price of butter per pound.	Amount paid to patrons for milk or cream delivered.
		Quantity.	Value.			
		lb	\$		cts.	\$
1901.....	286	9,047,260	1,798,264	19,896	19.88	1,548,576
1900.....	308	9,041,468	1,819,290	21,809	20.12	1,589,291
1899.....	323	9,113,964	1,746,362	22,090	19.16	1,448,411
1898.....	282	9,008,992	1,632,234	22,741	18.12	1,294,220

1894.....	115	3,162,550	662,297	8,298	20.94
1893.....	74	2,707,570	574,156	7,852	21.21

TOBACCO.

This crop is confined chiefly to Essex and Kent, the former county having about two-thirds of the acreage of the Province, although even in these counties it is not grown to a large extent. Correspondents reporting on the 1st of August spoke of the plant having done well, although some complained of "worms" being very bad. Much of the tobacco was planted rather late this year on account of the rain.

Only a few correspondents made reference to tobacco in the November returns. Where mention of it was made, however, the crop appeared to have matured well and to have escaped serious injury, except in a few instances.

The following table gives the acreages for the six years 1896-1901, and the yields for the last four years :

Year.	Essex.			Kent.			The Province.		
	Acres.	Total yield.	Yield per acre.	Acres.	Total yield.	Yield per acre.	Acres.	Total yield.	Yield per acre.
		lbs.	lbs.		lbs.	lbs.		lbs.	lbs.
1901.....	1,968	2,290,752	1,164	584	564,728	967	2,935	3,113,580	1,061
1900.....	1,620	2,065,500	1,275	449	583,700	1,300	2,477	2,854,900	1,140
1899.....	1,411	1,636,760	1,160	338	415,402	1,229	2,206	2,241,562	1,016
1898.....	5,086	7,095,970	1,395	2,140	3,013,120	1,408	7,871	10,560,590	1,342
1897.....	422	28	994
1896.....	315	21	667

There was a sudden boom in the growing of tobacco in Essex and Kent in 1898, but a decided shrinkage in the area occurred in the following year. There has been a steady increase in acreage in 1900 and 1901, however, and the rather satisfactory showing in Essex this year should add to the popularity of the crop. The average yield per acre of the Province has not varied greatly during the last three years.

"FRENCHING" OF TOBACCO. In the August crop returns one of our correspondents referred to the "Frenching" of some tobacco that he was growing. As no other complaints were received, it would appear that the disease was local rather than general in the Essex district.

Prof. Wm. Lochhead, Biologist at the Ontario Agricultural College, has furnished the Department with the following notes regarding the disease :

This disease of tobacco is known under different names in different sections. It is known as "Frenching" in the South, as "Mosaic Disease," "Brindle," and "Mongrel Disease" in the Northern tobacco districts, and "Calico Spot" in Connecticut and elsewhere. It is not yet quite certain that the disease known as "Frenching" in Essex is the same as that known under the same name in the South, for the characteristic feature of the disease in Essex is the yellowing of the main leaves and the production of tufts of rigid, worthless leaves on the larger leaves, while in the South the chief characteristic of the disease is a mottling and stiffening of the leaves.

The cause of the disease is not definitely known. Some investigators attribute the cause to an unknown parasite, probably bacterial; while others consider it a disease arising from purely physiological causes, associated either with movements of reserve proteids during growth, or with sudden changes of atmospheric conditions and unsuitable soil conditions.

The disease may occur quite early in the life of the tobacco plant—even in the seed-bed—and usually attacks the older leaves first. Apparently the disease is not contagious, and is not rapidly propagated through the soil of the field, nor will seeds from diseased plants necessarily produce unhealthy plants. In some regions diseased plants are more abundant on close, clayey soils than on open, porous soils.

The conditions which favor "Frenching" are: Unsuitable soil nourishment; very moist soil with little light; atmospheric conditions promoting rapid growth, and poor seed. It is a fact well known to most practical tobacco growers that "Frenching" is very liable to occur whenever a rapid production of sprouts on moist soil takes place.

Along the line of prevention, it has been recommended to keep the plants in the seed-bed cool (not too warm); to change the seed-bed; to practice rotation of crops; to remove the stubs of diseased plants after the crop is harvested; the use of chemical fertilizers instead of stable manure; the addition of lime, or some other substance, to the soil which will render it more porous; and the protection of plants at critical seasons from too sudden exposure to sunlight.

It is evident that a more detailed study of this disease is necessary before the real cause is discovered, and definite remedies or preventives can be applied.

LABOR AND WAGES.

The following was contained in the May bulletin: "The remarks of correspondents regarding farm labor and wages are deserving of careful consideration. The rush to the towns and cities continues, and it would appear as if urban attractions are drawing away a majority of the more ambitious and energetic young men and women from the farm. A considerable number of strong and active young men also leave agricultural pursuits for river driving and other lumbering operations just when the land is most in need of their services. Many complaints are made as to the inferior quality of most of the work now offering on our farms, and some correspondents assert that rates of wages are so high that a number of farmers will have to let a portion of their farms go untilled rather than hire hands at prevailing prices. A correspondent in the county of Grey mentions that the ten hour a day system has been introduced into his neighborhood with beneficial effect, both man and beast benefitting thereby, while just as

much work is done as under the old plan of working until sundown. Some correspondents also speak of the benefit resulting from 'tenant houses' being built on farms, and married men being given employment all the year around. Domestic servants on the farm are said to be even scarcer than ever."

August returns were thus summarized: "While a few correspondents state that there was a sufficiency of labor during harvest, most of those reporting speak of the scarcity of laborers, some saying that it was necessary to get boys to attempt the work, while one correspondent in Oxford tells of women driving binders, rakes, etc., in order to save the crops. As a rule no reasons were given for the lack of assistance on the farm, although a few correspondents refer to the attractions of Manitoba and the mining regions. Wages by the day during harvest ranged from \$1 to \$1.50, \$1.25 being common. Domestic servants, as usual, are hard to procure for work on the farm."

The question of labor and wages was thus dealt with in the November bulletin: "The great majority of correspondents report that the supply of farm labor was inadequate to meet the demand. The reasons given are temporary or permanent departures for Manitoba and the North-west, the high wages paid in the lumbering industry, and the migration to the cities and larger towns. Those correspondents who consider any change in the rate of wages likely nearly all predict an increase, but a large number express the opinion that the farmers cannot afford to pay more than present rates. Domestic help continues exceedingly scarce, the variety of other callings and employments now open to women attracting girls away from the farm. Immigration is the remedy generally suggested, often coupled with the proviso that the new arrivals must be of the 'right sort,' and disparaging criticisms on the immigrants who have been brought out."

The following table gives the average rate of wages paid farm laborers by the year and by the month, with and without board, for ten years, together with the average for twenty years; also the monthly wages paid domestic servants on the farm:

Farm Laborers.	1901.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1882-1901.

ANNUAL REPORT
OF THE
BUREAU OF INDUSTRIES
FOR THE
PROVINCE OF ONTARIO
1901.

PART III.—MUNICIPAL STATISTICS

(PUBLISHED BY THE ONTARIO DEPARTMENT OF AGRICULTURE, TORONTO.)

PRINTED BY ORDER OF
THE LEGISLATIVE ASSEMBLY OF ONTARIO.

TORONTO:
PRINTED BY L. K. CAMERON,
Printer to the King's Most Excellent Majesty.
1902.

TORONTO:
WARWICK BRO'S & RUTTER, PRINTERS.

CONTENTS.

MUNICIPAL STATISTICS :

PAGE.

Comparative tables as to <i>population, assessed values, taxation and debts</i> of Ontario municipalities	v.
Summary financial statement for all the municipalities of Ontario, being the aggregate of the several items of <i>Receipts, Disbursements, Assets and Liabilities</i> for ten years 1891-1900	vii.

POPULATION, AREA, ASSESSED VALUES AND TAXATION in 1900 and 1901 :

Showing details for municipalities arranged in alphabetical order, together with the average rate of taxes per head of population, and the average rate on the dollar :

Townships1900.....	2 ; 1901.....	54
Villages1900	32 ; 1901.....	84
Towns..... 1900.....	40 ; 1901.....	92
Cities1900.....	48 ; 1901.....	100

Showing total for township, town, village and city municipalities grouped into county limits, and giving comparative totals for "county limits" for 1891, 1900, 1901..	122
Comparative totals for the Province for sixteen years	120

RECEIPTS DISBURSEMENTS, ASSETS AND LIABILITIES FOR 1899 AND 1900 :

Showing an abstract statement for municipalities arranged in alphabetical order :

Townships1899.....	2 ; 1900.....	54
Villages1899.....	32 ; 1900.....	84
Towns1899.....	40 ; 1900.....	92
Cities 1899.....	48, 116 ; 1900.....	100, 118
Counties1899.....	50 ; 1900.....	102

Comparative aggregate for ten years :

Townships	106
Villages (8 years)	108
Towns (8 years)	110
Cities	112
Counties	114

POPULATION by Dominion Censuses and Municipal Assessment compared for the three years 1881, 1891, 1901, arranged according to municipalities	150
--	-----

EXEMPTIONS : Showing by municipalities, the exemption by by-law from general taxes, though subject to school taxes	129
--	-----

PART III.—MUNICIPAL STATISTICS.

The following statement is compiled from the summarized tables and gives population, total assessment, amount of taxes imposed for 1901, the amount of debenture and floating debt, together with the amount paid each year by all municipalities of the Province for interest for the fifteen years 1886-1900.

Year.	Popula- tion.	Total assessment.	Taxes imposed for all purposes.			Debenture debt.		Floating debt.	Interest paid on loans and deben- tures.
			Total.	Rate per head.	Mills on the dollar	Total.	Rate per head.

* The financial returns for 1899 from Dunnville, Hespeler, Huntsville, Kingsville and Preston recently incorporated as towns, are included above, but in 1898 and previously were included in tabulation for villages, —and Woodstock now tabulated as a city was formerly included with towns. These changes account for the following differences between balances reported at close of 1898 and the balances reported above, namely : a decrease of \$17,251 in balance from previous year, —a decrease of \$151,086 in Sinking Funds (assets); a decrease of \$243,098 in all debentures (liabilities) —and an increase of \$3,621 in Temporary Loans (Liabilities).

a The electric and other light plants in towns in 1900, aggregated \$716,197, as follows : Amherstburg, \$3,500 ; Barrie, \$39,672 ; Bracebridge, \$14,010 ; Bothwell, \$6,600 ; Brockville, \$100,000 ; Collingwood, \$30,173 ; Fort William, \$16,270 ; Goderich, \$26,902 ; Hespeler, \$11,554 ; Huntsville, \$8,574 ; Kincardine, \$13,528 ; Kingsville, (natural gas) \$30,000 ; Leamington (natural gas) \$20,000 ; Mitchell, \$9,000 ; Newmarket, \$11,500 ; Niagara, \$17,500 ; Niagara Falls, \$76,626 ; North Toronto, \$55 ; Orillia, \$32,000 ; Picton, \$23,547 ; Port Arthur, \$127,182 ; Prescott, \$15,618 ; St. Marys, \$5,262 ; Sudbury, \$30,713 ; Toronto Junction, \$24,000 ; Trenton, \$15,000 ; (North Toronto in addition to the foregoing, has an electric light plant estimated at \$10,000, in connection with its waterworks plant)

b Including Fort William, \$26,620 ; Kincardine, \$2,555 ; Listowel, \$1,677 ; Oakville, \$3,029 ; Owen Sound, \$9,296 ; Peterborough, \$31,491 ; Port Arthur, \$22,076 ; Seaford, \$3,100 ; Uxbridge, \$1,297 ; Walkerton, \$887.

FINANCIAL STATEMENT—CITY MUNICIPALITIES.

Summary statement showing the totals for the thirteen Cities of the Province of Ontario of the several items of Receipts, Disbursements, Assets and Liabilities for the ten years ending December 31st, 1891-1900.

Schedule.	1900.	1899.	1898.	1897.	1896.	1895.	1894.	1893.	1892.	1891.

* This large decrease in personal property was due to a change in the Assessment Act, which exempted farm live stock, etc.

POPULATION, ASSESSMENT AND TAXATION.

Statement of municipalities of Ontario (townships, towns, villages and cities) grouped into County limits, showing for 1901 the population, the area, the assessed values and amount of taxes imposed for all purposes, inclusive of schools, as shown by the assessment and collection rolls, together with the average rate per head of the resident population and mills on the dollar; also comparative totals by counties for 1900 and 1891.

Municipalities.	Popu- lation.	No. of acres assessed.	Assessed values.				Taxes imposed for all purposes.

MUNICIPAL EXEMPTIONS.

Statement showing by municipalities the "exemptions from general rates by by-law but subject to school rate" for the year 1901.
 NOTE.—These are entirely exclusive of statutory exemptions, but a few are given as still in force in which the by-laws exempted from all taxes. The returns show many cases of "fixed" assessments, but the information in all cases does not show the extent of the exemption. Besides the list given below, many towns exempt "farm lands" from certain taxes, such as street lighting, sidewalks, etc.

TOWNSHIPS.	Exempt except for schools.	Exempt for all purposes.	Description.	TOWNSHIPS.	Exempt except for schools.	Exempt for all purposes.	Description.
